Processor
        Intel Xeon E-2124, 3.3GHz, 8M cache
RAM
        8GB 2666MHz DDR4 ECC
Disks
        RAID 1 (2 + 2 HDDs/SSDs) - 300GB each

RegPerfect v8000.0 Enhancements

No enhancements in terms of new application or end-user features.

Lots of "enhancements" for:
- Building applications/components on new development computers to support the new server platform
- Changing application/component code because of the new server platform
    - Example: Setup, Reports Manager, etc. (applications that interact programmatically with Reporting Services) needed to be updated because SQL Server 2019 Reporting Services works a little differently than previous versions.
- Fixing bugs found during testing.
- Improving performance and stability throughout the RegPerfect suite.
